Vaccines:

Can they give us a disease-free world?

The effectiveness and safety of vaccines continue to be fervently debated. Can vaccines help us overcome the world's most urgent public health challenges? Or is there reason to be cautious about their use? Hear what Arizona State University researchers have to say.

Kenneth Roland

Associate Research Professor
ASU The Biodesign Institute, Infectious Diseases
and Vaccinology

Antonio Garcia

Professor
ASU School of Biological and Health Systems Engineering
and Harrington Biomedical Engineering

Science Cafés offer the opportunity for informal public discussion on timely issues involving the impact of science, engineering and technology on our lives.

Each featured expert typically speaks for 10 to 15 minutes. The remaining time is then held for audience questions and feedback.

Teachers now receive 1 hour Professional Development credit for each Café attended

Friday, September 16th, 2011

7:00 - 8:00 p.m.

Arizona Science Center

600 E. Washington St.

Phoenix, AZ

(602) 716-2000

Free Admission

The Center for Nanotechnology at Arizona State University is affiliated with the Consortium for Science, Policy & Outcomes (CSPO), in the College of Liberal Arts and Sciences. CNS-ASU research, education and outreach activities are supported by the National Science Foundation under cooperative agreement #0937591.
